# Govt to spend Rs14 billion on artificial insemination of livestock

APP  
ISLAMABAD

Special Assistant to Prime Minister (SAPM) on Food Security Jamshed Iqbal Cheema has said that government would spend Rs14 billion on artificial insemination of livestock in order to replace the local animals' breeds with high productivity supper breeds for enhancing domestic output of milk and meat. The initiative is being taken under Agriculture Transformation Plan for the uplift and development of livestock sector in the country to enhance local output of milk and meat for ensuring availability of pure, nutrient filled hygienic milk and meat to rural as well as urban population. Talking to APP, he said that livestock as an important sub-sector of local agriculture sector was contributing significantly in national GDP growth, besides it was a source of livelihood of a large bulge of rural popula-

tion and source to fulfill their daily dietary requirements.

The output of local livestock in terms of meat and milk production were far behind as compared to the international average, he said adding that total annual production of milk was stood at 62 million tons and government was paying special focus on this sector in transformation plan

ment was intended to enhance their output by ten times with artificial insemination.

## Initiative is being taken under Agriculture Transformation Plan to enhance output of milk and meat

to the revive it on modern lines. According to survey, he said that there were about 49 million cows, 41 million buffaloes and one million goats in the country, adding that their average milk production was less then as compared to the other countries and govern-

Jamshed Iqbal Cheema further said that there were about 30 million household livestock, which depending on their output but local production of these animals were lower as compared the production of the high breeds of other countries, adding that

low productivity was harming the both farmer as well as consumer. Under artificial insemination to low producing local breeds of animals would be replaced with super breeds that would help to enhance the output tenfold, adding that it would benefit the small farmers having one or two animals and increase their income. In this regard, he said that mapping and survey were conducted and areas were identified for the production of different crops including fruits, vegetables, oil seeds and pulses, besides identifying areas of the production of livestock and super food to make agriculture more profitable.
